

The Smart Choice in GC Consumables

SH-GC-Columns

Shimadzu offers a broad range of columns, suitable for every GC/GCMS-system. Various stationary phases are available in a variety of dimensions, suitable for many different applications.

SH-GC column line-up:

- **SH-I** Superior inert, high performance columns
- **SH** Robust and reliable general purpose columns
- **MetalX** Metal column for high temperature applications
- **Dedicated Columns** for specific use, 1614, CLP, BAC, WAX, ...
 - PLOT Columns
 - Fast GC Columns
 - Guard Columns

Genuine Spares and Accessories

Shimadzu approved quality – valves, connectors, nuts ... and further parts from the original instrument manufacturer help you to ensure the best function of your instrument.

Gas Filter

Impurities in gases, such as hydrocarbons, moisture and oxygen, can contaminate the gas line and instrument, cause column degradation and affect the accuracy of your analytical results, which may lead to instrument downtime. Even when using high-purity gases, contaminants may result from pressure regulators or other connections in the gas line. Therefore, an additional gas filter is essential to ensure highest security and performance.

Ferrules and Unions

Shimadzu provides an array of connection types to use in the GC, each selected to ensure the best connection solution is achieved. The correct selection of the connection type will eliminate dead volumes, leaks during temperature cycling and problems with mismatched tubing sizes.

The One-Stop-Supplier for all Your Needs

Inlet Liner

The GC inlet liner is where the sample is introduced and vaporized into the gaseous phase. The geometry of each Shimadzu inlet liner is important and the correct choice of inlet liner can significantly improve the chromatographic performance. Inlet liner deactivation and quartz wool quantity and position are essential to ensure reproducible and accurate sample introduction of each sample type.

GC Vials and Caps

Shimadzu offers a broad range of vials and caps for GC/GCMS and Headspace applications. You can either assemble your set of vials and caps according to your demands or choose from pre-assembled kits. The portfolio covers vials for all needs, ... from certified GCMS vials, via standard vials to accessories like vial-boxes and crimping-tools.

Syringes

Shimadzu syringes for both manual and autosampler offer a superior performance, with an improved durability, precision and accuracy.

SPME

Solid Phase Microextraction (SPME) is a solvent-free sample preparation technology. The fibers and arrows are coated with a sorbent, which extracts the analytes of interest from the sample. Shimadzu offers a wide variety of SPME fibers and arrows based on the **SMART-technology** of our **AOC-6000plus autosampler**, suitable for a broad range of applications.

Inlet Septa

Low-bleed septa are not completely free of bleeding. The type of bleeding that occurs varies with the septa, and results in different patterns on chromatograms. Therefore, Shimadzu septa are selected to contribute to low bleed and optimum sealing for many injections.
